1.先下载

```
1 | npm install vue-pdf --save-dev
```

2.在局部引入,使用

```
1 <template>
2   <pdf src="./static/relativity.pdf"></pdf>
3 </template>
4
5 <script>
6   import pdf from 'vue-pdf'
7
8   export default {
9     components: {
10       pdf
11     }
12   }
13 </script>
```

例子：可实现放大缩小，翻页功能

```
1 <template>
2   <div class="all">
3     <!-- <Mheader status="useAgreement" class="head" /> -->
4     <header>
5       <router-link to="/main/mine" slot="left" class="sprites_all sprites_back"></router-link>
6       <div class="newbankCard">
7         <span class="sprites_all sprites_back" @click="goBack"></span>
8         <span class="pf_thick">{{clauseTitle}}</span>
9       </div>
10    </header>
11    <div class="main">
12      <!-- {{currentPage}} / {{pageCount}} -->
13      <pdf :src="src" :page="currentPage" @progress="loadedRatio = $event" @num-pages="pageCount">
14        <!-- <button @click="changePdfPage(1)">+</button> -->
15      </pdf>
16      <ul class="footers">
17        <li :class="{select:idx==0}" @touchstart="idx=0" @touchend="idx=-1" @click="scaled">
18          <p>放大</p>
19        </li>
20        <li :class="{select:idx==1}" @touchstart="idx=1" @touchend="idx=-1" @click="scaleX">
21          <p>缩小</p>
22        </li>
23        <li :class="{select:idx==2}" @touchstart="idx=2" @touchend="idx=-1" @click="changePdfPage(1)">
24          <p>上一页</p>
25        </li>
26        <li :class="{select:idx==3}" @touchstart="idx=3" @touchend="idx=-1" @click="changePdfPage(2)">
27          <p>下一页</p>
28        </li>
29      </ul>
30    </div>
31  </div>
32 </template>
33
34 <script>
35   import pdf from "vue-pdf";
36   import Mheader from "../Mheader";
37   export default {
38     components: {
39       pdf,
40       Mheader
41     },
42     data() {
43       return {
44         src: "static/relativity.pdf",
45         currentPage: 1,
46         pageCount: 1,
47         clauseTitle: "相对论",
48         idx: 0
49       };
50     },
51     methods: {
52       scaled() {
53         this.idx = 0;
54       },
55       scaleX() {
56         this.idx = 1;
57       },
58       changePdfPage(1) {
59         this.currentPage = 1;
60       },
61       changePdfPage(2) {
62         this.currentPage = 2;
63       }
64     }
65   };
66 </script>
```
